ABSTRACT

Engineered Cementitious composite is an ultra ductile cementitious composite which is highly crack resistant, with a tensile strain capacity over that of normal concrete. In this study, three different types of PP. fibers are added to cement mortars with the aim to determine how they can be used to develop ECC materials. Fibers are used in different (aspect ratio, tensile strength and different proportions in volume fraction (1.0, 2.0, 3.0 and 4%)) in concrete mixture design. Hardened concrete properties, 28-days splitting tensile strength, flexural strength, cracking width were evaluated. Statistically significant effects were observed for polypropylene fibers on the splitting tensile and flexural strength, toughness indexes, and durability parameters showed an increase in the presence of polypropylene fibers. Increased fiber availability (fiber aspect ratio) in the concrete matrix, in addition to the ability of longer polypropylene fibers to bridge on the micro cracks, are suggested as the reasons for the enhancement in mechanical properties. Finally, crack width in fiber-reinforced concrete is calculated analytically with fiber property variables (fiber type, length, diameter and proportion). Results are compared with experimental values and concluded that with an increase in fiber length and/or decrease in fiber diameter crack width, decrease significantly

ABSTRACT

To meet the needs of modern infrastructure, new innovative materials and technologies have started their way in the construction industry. Any technology or material has its limitations with structures became older and with increasing bar corrosion, older buildings began to demand extra retrofits to increase their durability ad life. Recent studies suggest that glass fibers may help replace cement in the concrete industry in this project we tried to overcome the above stated structural and environmental problems faced by the engineers in day to day construction. The major objective of the is to overcome the retrofitting and reconstruction and repairs capital investment. As the GFRP bars GFRP-S) (.20%) used in the deck slab gives higher ultimate load bearing capacity (102KN) and minimal deflection (.061 m) as and when compared with conventional deck slab made of steel(SS) and the fully replaced with (GFRP-F)(.30%).From this we can say that it can be a game changer and has the ability to revolutionize the field of civil engineering and its applications.

ABSTRACT

Pervious Concrete is a specially formulated concrete having minimal or no fines in it, which makes the concrete to form voids in it. The Pervious concrete is casted with only three main ingredients cement, coarse aggregate and water. As the pervious concrete omits fine aggregate, the strength of the concrete is decreased so that it cannot be used as a Conventional Concrete. It can be used in the areas where there is low traffic volume. The main characterises of the pervious concrete is, it allows the water to pass through it. By the virtue of this property the pervious concrete is used in the water-logged areas. In this study an investigation has been done on the materials which are suitable for the pervious concrete to enhance the Compressive strength. Coarse aggregate has been varied and tested with different W/C ratio as prescribed by the Response Surface Methodology (RSM) and the Reponses Permeability and Compressive strength of the Pervious Concrete is recorded and inputted in the Response surface Methodology later the results are analysed using Central Composite Design. The results of the analysis show the optimized values i.e., 0.34 W/C ratio and 10mm size of aggregate that can be adopted to cast pervious concrete to attain the permeability of 4.41mm/sec and compressive strength of 8N/mm^2.The optimized values are noted, using these values pervious concrete using bricks as aggregates are casted and tested after the curing period. The responses permeability and compressive strength are then compared with the Conventional pervious concrete. The effect of porosity on the permeability was significant as the maximum porosity attained was 20% which has a maximum flow rate of 4.41 mm/sec which shows that the porosity is directly proportional to the flow rate of the pervious concrete mixtures. The Predicted Maximum Compressive strength of the PC mixtures was 17 N/mm^2. Later the results show the maximum compressive strength of 12 N/mm^2 for Coarse aggregate induced Pervious Concrete mixtures. The bricks induced Pervious Concrete mixtures has a Maximum Compressive strength of 5.5 N/mm^2 which describes that the compressive strength of the PC mixtures having bricks as aggregate has a less compressive strength as compared to the PC mixtures induced with coarse aggregate.

ALTIUS

31.09.2021

FROM: Ghanshyam Devanand

(Founder & Director)

Altius Aerospace Pvt Ltd

Re: Accomplishment Letter

Dear Akshata Patil,

I am delighted to offer you the opportunity to join Altius Aerotech (hereinafter, "Altius") as 'Technical Intern' with the Bangalore office (HQ) of Altius. We believe that your skills and background will be valuable assets as we grow our business. We also believe that Altius will provide the best environment for your skills to be highlighted. You shall report to Mr Bhalky Shiva Kumar- Sr. RF Hardware Engineer.

You will take up the position of 'Technical Intern- RF and Microwave' at Altius, and your role will be based in Bangalore with effect from 01.09.2021 to 31.09.2021. Attached to this letter are some of the terms and conditions that will govern your internship contract with Altius. If you choose to accept this offer, please sign this letter in the space provided and return it to us.

I look forward to welcoming you as a critical member of the team.

Sincerely,

For ALTIUS AEROSPACE PVT. LTD.

Director

Internship Offer Letter

Dear **Ms. Sheetal G (USN: 3GN18CS094),**

In reference to your application, we are excited to inform you that you are selected for internship with **IGEEKS TECHNOLOGIES** based at Bangalore. Your internship is scheduled to commence from **03.09.2021 to 04.10.2021** .All of us our iGEEKS TECHNOLOGIES are excited that you will be joining our already competitive and fun loving team!

As such, your internship will include training/orientation on hands-on of some real world applications in your domain and focus primarily on learning and developing new skills and gaining a deeper understanding about concepts in your chosen domain.

The project details and technical platform will be shared with you once you complete the necessary formalities and submit the required documents. You will be assigned with an intern coordinator who will guide you through out your internship period and will be your point of contact for all your technical/non-technical queries.

As you will be receiving academic credit for this position, you will not be paid; additionally students do not receive benefits as part of the internship program.

You should report for internship at the following address:

IGEEKS TECHNOLOGIES
No.19, MN Complex, 2nd Floor, 2nd Cross, Sampige Road, Malleswaram, Bangalore-560003

Again congratulations and we look forward to working with you.

Yours sincerely,
For IGEEKS TECHNOLOGIES
