WOMENS EMPOWERMENT

No of Girl Students Participated: 30

Empowering girl students to fight back against crime has been the call of the day. In this modern era, violence against girl students has been very common in every street of both rural and urban setting. Small kids, girls and even women members are feeling insecure the moment they are out of their homes for any purpose for those matters. It is very important for every girl and woman to get prepared mentally and physically well equipped with required skills and techniques to defend oneself from any kind of antisocial element prevailing in the society today.

The main objectives of the program were

- 1) To enable them to defend against any type of physical assault.
- 2) To spread a message to the violence-maker that girls are being ready for counter and awareness is being developed among the girls in this regard.
- 3) To empower the girl students in all aspects

With these emerging needs and objectives in mind, Girls Students of MBA Department, GNDEC Bidar, under NSS UNIT has organized an awareness program in the local village to bring awareness among the people about Women Empowerment.

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

SAPLING PLANTATION

The students of Electronics and Communication Engineering department conducted the programme of sapling plantation. This drive was conducted under the programme officer Dr. Kishan Singh along with Prof. Prof.Soni Mankari ,Prof.Pradeep Karanje as coordinators.

Tree planting is recognised as one of the most engaging, environmentally-friendly activities that people can participate in to help the planet when done properly. Trees provide numerous long-term and short-term benefits. They not only look nice, but they also remove and store carbon from the atmosphere, slow heavy rain and thus reduce the risk of flooding, improve air quality, and reduce the urban heat island effect by reflecting sunlight and providing shade. Let us take a look at the long and short essay on tree plantation.

When you plant a tree, you are not only planting a sapling but also hoping for the best. We have learned the hard way that trees are critical to our survival. We began by deforesting the earth to make room for more buildings. Later, when we saw the environment deteriorating, we were introduced to “afforestation,” a simple process of planting more trees for a better future.

Trees are essentially human and other living organisms' livestock. They have unconditionally provided us with food, oxygen, and a variety of other necessities for human survival, such as shelter, medicines, tools, and so on.

Despite their rich values and importance, trees are still not properly cared for. They are cut down, eradicating all forms of life in the surrounding area.

However, the relevance and importance of planting trees have only grown with each passing day. More trees must be planted as a collective effort by all of humanity to save our ailing planet.

As a result, we have our global Tree Plantation Day, which is observed on March 21st all over the world. The purpose of observing the said day is to make people aware of the importance of planting trees and to assist them in doing so. Planting saplings to invest in the future is a common practice on tree plantation days.

SAPLING PLANTATION

Bidar, KA, India

**Gandhi Nagar, Bidar, 585403, KA,
India**

AB
Engineering College, India

Deforestation has resulted in devastating floods and landslides. The significance of "tree plantation" can also be emphasised for forest conservation and wildlife protection. Wild animals are facing a scarcity of inhabitable forest areas as lands are cleared for farming and industrial purposes.

Because urban areas lack trees, they suffer from severe problems such as smog and polluted air. The "Tree Plantation" becomes a long-term solution to such problems. Vehicle exhaust, wood and coal combustion, factories and industries all emit hazardous pollutants and greenhouse gases into the atmosphere.

The Indian government is allocating funds through the Compensatory afforestation fund management and planning account (CAMPA) to carry out such massive "tree plantation" campaigns in both urban and rural areas. State governments are also taking extensive measures to improve forest and tree coverage. The Maharashtra government entered the coveted Limca Book of Records by conducting a massive "tree plantation" with the help of citizens and various Non-Governmental Organizations, planting 2.82 crore trees in a single day.

Our planet's ecological system is a shared responsibility of all citizens. The "importance of tree plantation" is becoming more apparent as we observe the deterioration of the forests and the ecosystem. The Indian government and various non-governmental organisations are working to

Dhanya
PRINCIPAL
Eco Monitors & Green Guards
Dhanya

raise awareness about climate change and other environmental issues. Massive "tree plantation" programmes must be implemented to address the current ecological issues.

Tree plantation is significant because it is linked to our basic need for good food to eat and clean air to breathe. Aside from these necessities, they preserve biodiversity, conserve water, preserve soil, and control climate, among other things.

Tree plantation is important because it provides fresh fruits, vegetables, nuts, and other foods for the survival of life on Earth. They are the producers and the source of food energy for all living things to survive, as they are at the bottom of the food chain. Aside from this basic need, tree plantation is important for humans to meet their medicinal needs, fodder for domestic animals, household tools, fuel, and so on.

Trees provide clean air for living beings to breathe and generate energy. The importance of plantations for a healthy life free of suffocation and pollution cannot be overstated, particularly in urban areas.

The importance of tree plantation in preserving biodiversity and balancing the ecosystem cannot be overstated. Trees provide a natural habitat for many different species. A diverse and healthy ecosystem revitalises the land and life on Earth.

Trees are also known for their ability to hold soil and prevent erosion.

The topsoil of the earth is washed away by water during rain and floods. The roots of the trees play an important role in preventing erosion of the topsoil.

Because trees absorb carbon dioxide from the atmosphere, tree plantation is the most effective organic method for reversing global warming and preventing climate change. In recent years, particularly since the 2015 Paris Agreement on Climate Change, the importance of tree plantation has grown significantly in many countries.

Benefits of Tree Plantation

They are so valuable and significant that their applications have only grown to meet the demands of our modern lifestyles. Initially, the tree's wood was used as fuel, and the fruits were devoured by people. The shade was utilized to keep cool in the summer and the fire was used to keep warm in the winter.

Here are some of the benefits that a tree plantation can provide:

1. Importance in terms of ecology and environment

Dr. Dinesh Kumar
PRINCIPAL
Guru Nanak Dev Engg. College, Bidar

Trees provide a significant contribution to their surroundings by giving oxygen, sustaining species, improving air quality, saving water, maintaining soil and reducing climate change. It provides more than it gets by concentrating on its principal job of photosynthesis. Trees absorb carbon dioxide from the atmosphere and create oxygen for the surrounding living, breathing species. According to one research, one acre of forest may create up to 4 tons of oxygen while absorbing up to 6 tons of carbon dioxide, enough to feed about 20 people for a year.

This procedure involves not just trees, but also bushes and grass. Pollutants such as carbon monoxide, nitrogen dioxide, and sulphur dioxide are absorbed by them, purifying the air. The contaminants are washed away by the rain once they come into touch with the trees. The air in the atmosphere is managed and preserved as a result of this process, owing to the trees. One of the most important tasks of trees is to manage and modify the climate. To keep the climate under control, they mitigate the impacts of the sun, rain, and wind. The sun's rays are absorbed and filtered by the leaves, which assist to maintain a cool temperature surrounding it.

The most significant role of trees is to keep greenhouse gases at bay by lowering air temperature, maintaining low carbon dioxide levels, and thereby minimizing the greenhouse effect in the atmosphere. Aside from that, they keep the heat in by acting as a screen against strong winds, heavy rain, sleet, and hail. As a result, trees may control and affect wind speed and direction to maintain a balanced environment.

Trees serve an important part in the ecosystems in which they reside, whether above or below ground. The trees' extensive roots assist in keeping the soil in place and preventing erosion. The reason for this is that soil erosion is not a regular occurrence. They absorb and retain rainwater, reducing runoff and sediment deposits during big storms.

The herbivorous creatures can only survive on the leaves and fruits that the trees give. Elephants, koalas, and giraffes are just a few of the creatures that eat leaves. The blooms attract monkeys, while the delicious nectar attracts birds, bats, and other insects. Animals, like ourselves, ingest the fruits, which results in another process in which seeds are distributed across large distances.

Many creatures, birds, and squirrels live in them and prefer to keep hidden among the leaves to avoid predators. Trees are a crucial aspect of our environment and every living organism on the planet has a place in them. Many animals call trees home, and they live peacefully in them.

2. Contribution to the Community

Trees are an important component of every community and it takes a lot of effort to keep them that way. You may have noticed that trees border your streets, parks, playgrounds, and backyards because of their medicinal and life-giving powers. Trees provide a serene and tranquil environment, therefore human settlements are incomplete without them. The number of trees surrounding you can impact the quality of your life.

D. Shrestha
PRINCIPAL
Guru Nanak Dev Engg. College, Bidar

Trees provide natural aspects and wildlife habitats into urban areas, making them more desirable places to live. We all take advantage of the shade given by trees during the day for family picnics and afternoon outdoor activities. The relevance of planting trees and the quality of life in a community may both be enhanced by the presence of trees. Many ancient trees serve as historic markers and act as a source of pride for the community. Commercial buildings and pavements produce heat island effects in the atmosphere, while trees may deflect sunlight and significantly diminish the heat island impact.

3. Personal Well Being

Planting trees may also help people become better versions of themselves since it gives them a sense of accomplishment while also helping to safeguard the environment.

As they grow and develop with you and your family, trees play an important part in the development of one's youth and chronicle the family's history. People have an emotional connection with the trees they plant and form an immediate link with them. Because of our close relationships with trees, there are numerous organizations all over the globe dedicated to safeguarding and saving huge and historic trees from the dangers of contemporary development.

Trees have spiritual and religious significance in certain nations since they are regarded as equal to gods and are worshipped on special occasions. As a result, trees play an important role in forming our environment.

Conclusion

We recognise that one of the most serious issues in the current state is the devaluation of trees. To make our world greener and better, we must pay more attention to tree planting in the future. Individual contributions should be made first. We should also put a stop to tree cutting and remember that without trees, there will be no life.

The tree is very important in our lives. Everyone should be aware of the importance of tree planting and should motivate and encourage others to do the same.

Activity Location: Astoor, Bidar

Objective of Program:

1. To overcome inappropriate planning in agriculture
2. To produce value-added products
3. To provide variation in diet

Importance of Food Preservation:

1. Increasing the self-life of foods thus increasing the supply. So many perishable foods can be preserved for a long time.
2. Making the seasonal food available throughout the year.
3. Adding variety to the diet.
4. Saving time by reducing preparation time and energy, as the food has already been partially processed.
5. Stabilizing prices of food, as there is less scope of shortage of supply to demand.
6. Decreasing wastage of food by preventing decay or spoilage of food.
7. Improving the nutrition of the population. Preserved foods help people to bring a variety in the diet, thereby decreasing nutritional inadequacies.

Methods of food Preservation:

1. Chilling or Cooling
2. Drying
3. Pickling
4. Canning

Details of Program:

Creating awareness on food preservation and packing methods.

Program Outcome:

1. Participants could adopt different food processing techniques.
2. Participants were able to preserve food using various methods

DIGITAL INDIA

No of Students Participated:50

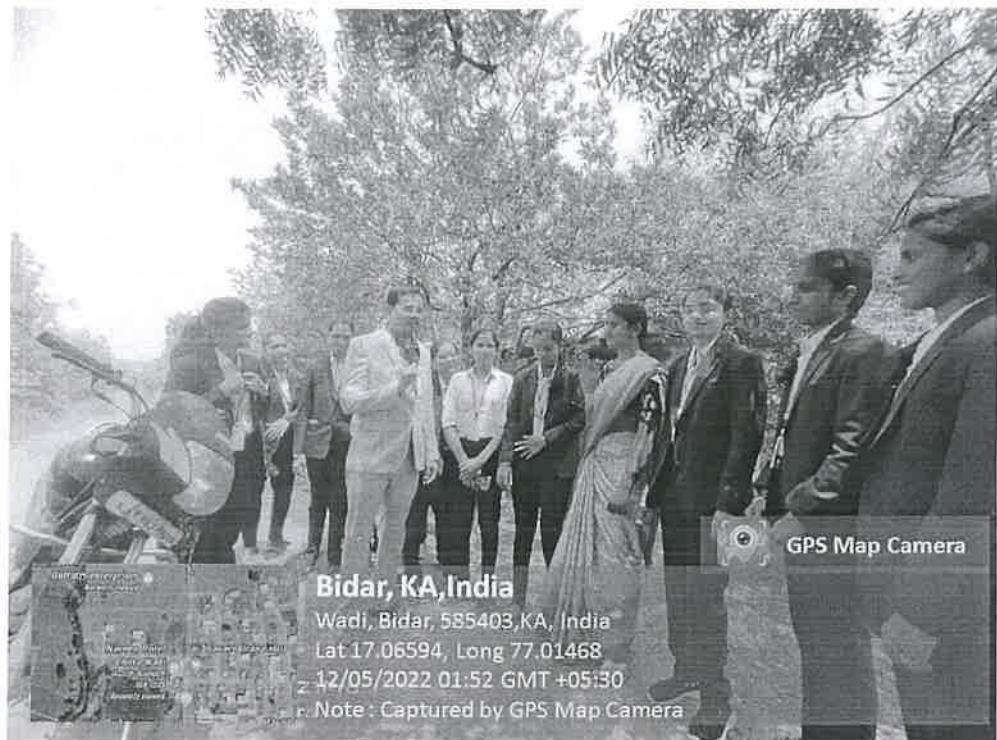

The Digital India campaign is an initiative launched by the Government of India in 2015 with the aim of transforming India into a digitally empowered society and knowledge economy.

The objective of the Digital India campaign, is to transform India into a digitally empowered society and knowledge economy by providing high-speed internet connectivity to rural areas, promoting digital literacy and skills, and delivering government services to citizens electronically. The campaign aims to bridge the digital divide and promote the development of the country's technology industry and startup ecosystem, among other objectives.

With these objectives in mind, Students of MBA Department, GNDEC Bidar, under NSS UNIT has organized Digital India campaign to address the need for digital transformation in various aspects of Indian society and economy.

WORLD SUICIDE PREVENTION DAY

The NSS volunteers of our College have precipitated in world

Suicide Prevention Day Programme conducted at Rang Mandir

Bidar on 12-09-2020. Our volunteers have conducted a skit on

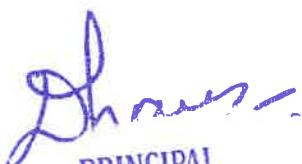

how to prevent from suicide. Around 20 Volunteers were

participated and conducted the skit in front of audience

presented at Rang Mandir. All were appreciated and Bidar

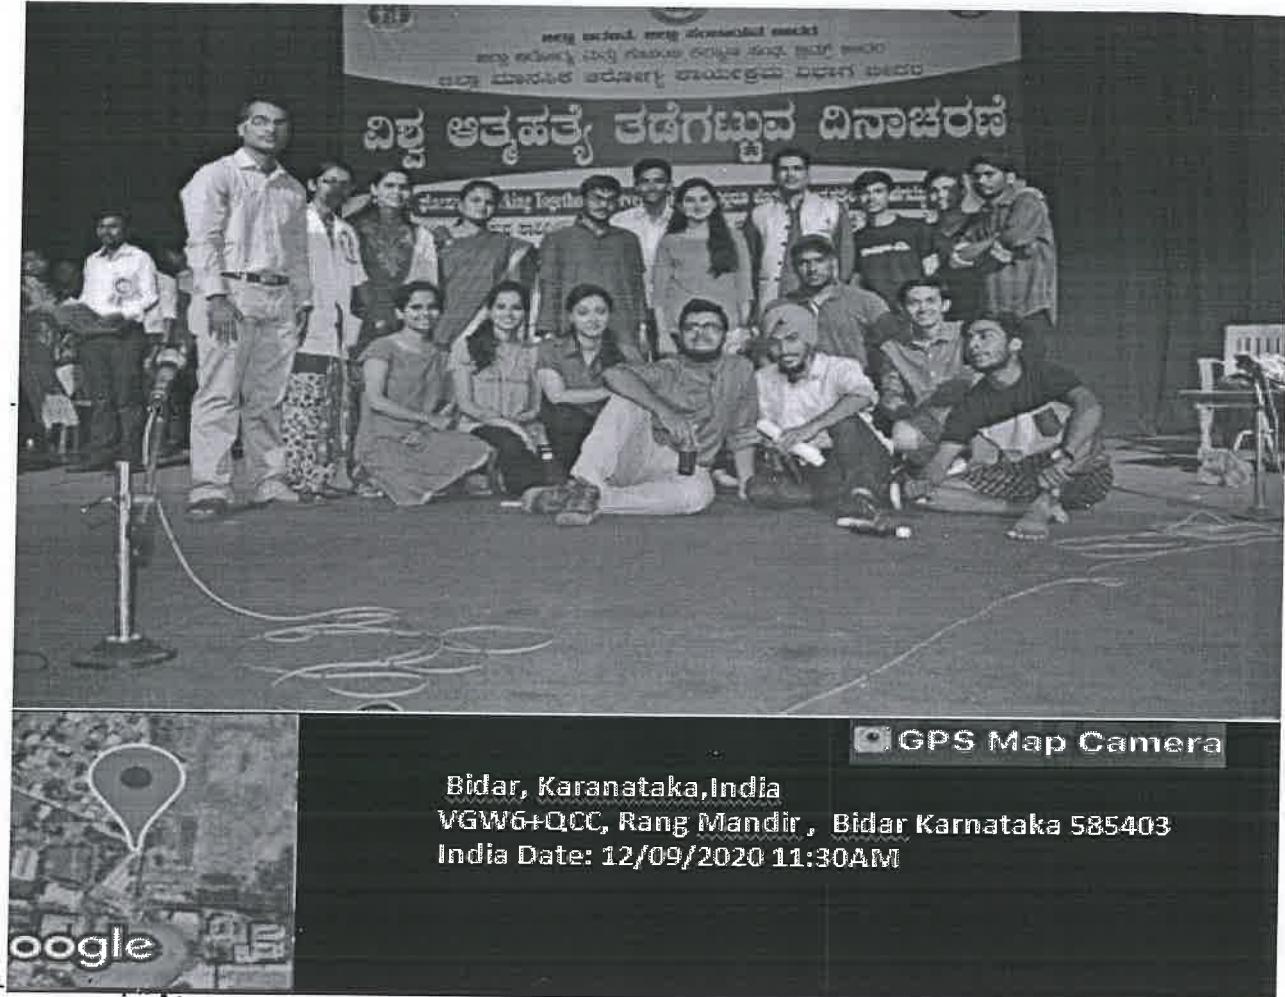

District Collector honor to our volunteers for the best

presentation of the skit.
